

Professional Summary:

- **1.7 years** of professional experience in Software Testing includes **Manual Testing and Automation testing**.
- Hands on experience of preparation and execution of test cases using **Selenium (Web automation), Java, Maven, TestNG, Autolt, Sauce labs, Git, Rest Assured (API Testing), Cucumber, and Jenkins**.
- Experience in phases of **Software Testing Life Cycle (STLC)** and extensive knowledge about **Software Development Life Cycle (SDLC)** including **Agile** Methodology.
- Good experience in defect life cycle and reporting Bugs using **JIRA**.
- Expertise in writing Test Cases, Execution of Test Case and Bug Reporting.
- Experienced in Analysing Requirements, Writing Test Plans, Test Estimation.
- Good experience in Exploratory, Functionality, Smoke and Regression Testing.
- Executing scripts by using **TestNG** concepts like Grouping, Parallel Execution, and Data Providers.
- Executed test scripts on **Firefox & Chrome** Browsers for **Cross Browser Testing**.
- Possess strong Communication, Collaboration & Interpersonal skills.

Experience Summary:

- **Quality Assurance Engineer — Oracle** (via High Points Technologies Pvt Ltd), **June 2024 – Present**.

Technical Summary:

SKILLS	EXPERIENCED	AWARENESS
Programming Languages	Java ,TypeScript	
Operating Systems	Windows family ,Linux	
Web Technologies	HTML , XML	
Manual Testing	Smoke Testing, Sanity testing, Functional Testing, Regression testing, Exploratory Testing	

Test Tools	Selenium WebDriver, playwright Autolt, TestNG, RestAssured, Postman, JMeter, POM, BDD(Cucumber), Jenkins ,	
CI Tools	Jenkins	
Databases S/Ws	MYSQL	
Source Control	Git ,GitHub	
Defect Management Tools	JIRA, Azure DevOps	
IDEs	Eclipse, Vscode	
Build Tool	Maven	

Educational Qualification:

- Master of Computer Applications -Andhra University
- Bachelor of Science(Computers) -Andhra University

PROJECTSUMMARY

Project # I

Title : Oracle RCL(Receive, Consolidate, Load).
 Client : Oracle
 Role : Quality Assurance Engineer
 Duration : June 2024 to till date.
 Environment : **Java, Selenium, POM, Postman, Rest Assured, Git&GitHub, MySQL, Jenkins,.**

Project Overview:

Designed and automated test cases to simulate warehouse operations for receiving items, consolidating shipments, and outbound loading. Ensured compliance with real-time logistics tracking and fulfilment accuracy.

Roles and Responsibilities:

- Developing Automation scripts using **Selenium** for the new functionality interacted with the users for Requirement gathering.
- Modifying the Existing automation scripts as per the Application Enhancements.

- Develop, enhance, and execute the test scripts using **Selenium Web driver, Rest Assured and Java**.
- Responsible for preparing **Web Services Testing (API Testing)** Test Plan.
- Developing **API automation scripts using Rest-Assured library**.
- Responsible to verify **Web services API request, response data validations in REST**.
- Creation of automation scenarios and Test cases.
- Performing Functional, Regression testing on data fabric application to verify input and output files.
- Run and test the Developed Automation script on Jenkins to verify data fabric functionalities and transformation logics on daily basis for UI and API automation scripts. • Creation of the effective Test reports by evaluating Test results
- Maintaining all test cases in **JIRA using Zephyr tool**.
- Identifying the Defect and log & Report the Defects using JIRA
- **Designed Automation Framework and developed automation script for different subdomains using Java**.
- Participating Agile Scrum calls on daily basis.
